“Invisalign®” Page

WHAT ARE ALIGNERS MADE OF?

During treatment, your dentist will give you a set of invisible aligners. These aligners are made of flexible, thermoplastic materials developed specifically for you. You will need to wear these aligners for two weeks before changing to the next set.

HOW DOES INVISALIGN® ADJUST AND ALIGN MY TEETH?

The Invisalign aligners will constantly adjust your teeth. The aligners align your teeth with the placement of controlled force on the teeth. They carefully and continuously adjust your teeth in tiny successions. You will need to wear these aligners for 22 hours a day.

WHAT MAKES INVISALIGN® BETTER?

Invisalign aligners are comfortable to wear, transparent and virtually invisible. People may not even notice that you are wearing aligners! Unlike your typical braces, aligners have no metal wires and brackets and are also removable - meaning you can eat and drink whatever you want while maintaining good oral hygiene.

WHAT IS IT AND WHEN IS IT NEEDED?

Invisalign is the invisible approach to align and to adjust your teeth. People around the world are choosing Invisalign over other treatments for its convenient and no-hassle way to achieve their dream smile.
